CARDINAL — Human-in-the-Loop AI Platform for Game Live-Ops

Executive Summary:

CARDINAL is a B2B Multi-Tenant SaaS platform that automates the generation and deployment of Live-Ops events, quests, and assets for game studios. By combining AI speed with strict Human-in-the-Loop control, CARDINAL is expected to reduce event production costs by up to 85% while ensuring 100% server safety and balance stability (expected results, to be validated in pilots).

1. The Problem

- **High Live-Ops Costs:** Operating live games requires continuous content updates (events, skins, quests). Producing events manually takes weeks and costs studios tens of thousands of dollars.
- **Fear of Uncontrolled AI:** Game developers hesitate to use autonomous AI due to risks of broken game economies, bugs, and inappropriate content.
- **IP Crossover Barriers:** Negotiating brand/mythology crossovers is slow and expensive without rapid, high-quality visual prototyping.

2. The Solution (CARDINAL Platform)

- **Engine-Agnostic SDK:** Plug-and-play integration for Unreal Engine, Unity, and custom engines via lightweight SDKs and REST APIs.
- **Human-in-the-Loop Architecture:** AI is expected to generate up to 90% of assets and mechanics, but deployment requires explicit administrator approval via a single click.
- **Manual Override Module:** Admins retain total control to modify or swap any 3D model, sound, text, or stat in 1 click.
- **Public Domain & IP Engine:** Automated generation of culturally compliant events using global mythology, historical events, and public domain IP.

3. Business Model

- **Multi-Tenant B2B SaaS:** Tiered monthly subscription ($200 – $2,000+/mo) based on Active Player Count (MAU).
- **Success Fee / Revenue Share:** Percentage-based fee on incremental revenue generated from AI-driven events.
- **Enterprise Customization:** Premium onboarding and fine-tuning for AAA studios.

4. Market Opportunity

- **Target Audience:** Mid-size to AAA Multiplayer and Mobile Game Studios.
- **Addressable Market:** The global Live-Ops and Game Analytics market is projected to reach $15B+ by 2028.

5. The Ask (Pre-Seed Round)

- **Raising: $150,000 (Pre-Seed)**
- **Use of Funds (12 Months):** MVP development, Engine SDK build (Unreal/Unity), core AI pipeline optimization, and initial pilot testing with 3–5 partner studios.
